Special Issue

Gels for Biomedical Applications

Message from the Guest Editors

Gels play a pivotal role in biomedical applications due to their unique physical properties and versatile capabilities such as biocompatibility, biodegradability, and adaptability to different environments. These threedimensional polymeric crosslinked networks resemble natural tissues and are extensively used in drug delivery. tissue engineering, wound healing, and diagnostics. Gels can be designed to release drugs in a controlled manner, and tailoring their composition allows us to control biocompatibility, biodegradability, and mechanical properties, which are crucial for specific applications. This Special Issue focuses on recent research in innovative material design, resulting in improved gel properties, stability, and functionality in the biomedical field. We welcome contributions tackling gel development, characterization, and evaluation.

About the Journal

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editor-in-Chief

Prof. Dr. Esmaiel Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
