Deadline for manuscript
submissions:

closed (31 January 2021)

Message from the Guest Editor

A comprehensive understanding of plant circadian system, its connection with other signaling pathways, and circadian processes that are temporally and spatially controlled by the clock are currently the main focus in plant circadian clock field. Circadian function relies on an intricate regulatory network in which essential clock components rhythmically regulate the expression and function of each other, and generate rhythms in multiple biological activities. Initial mechanistic studies on *Arabidopsis thaliana* have rapidly expanded to other crops of agronomic interest, opening interesting possibilities of translating the circadian knowledge into changes in crop productivity and resilience. New perspectives are also arising from studies on clock natural variation and evolution as well as on the specificities of the circadian function in cells, organs, and the circadian connection within the whole plant.

We welcome papers related but not limited to: transcriptional, post-transcriptional, and epigenetic mechanisms of clock regulation; processes regulated by the clock; and their connection with the predictable changes in light and temperature using *Arabidopsis* and other plant species.

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank: JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
