Deadline for manuscript
submissions:

closed (30 November 2017)

Message from the Guest Editor

Dear Colleagues,

The human gastrointestinal tract is constantly exposed to microorganisms. It is now recognized that microbes are potent modulators of the homeostasis and disease status of the intestinal tract. The connection between microbes and cancer has important implications to cancer prevention, diagnosis and treatment. On one hand, individual microbes or microbial communities can cause cancer, increase cancer risks or affect the efficacy of cancer therapy. On the other hand, the effect of individual microbes or microbial communities can be influenced by host genetic, environmental and dietary factors. This Special Issue intends to focus on new developments and concepts in the field of microbes and cancer. Research or review articles on any topic within the field will be considered. We look forward to your contributions.

Assoc. Prof. Yi Xu

Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank: JCR - Q2 (*Genetics and Heredity*) / CiteScore - Q2 (*Genetics (clinical)*)
