

## Special Issue

# Genetics of Abiotic Stress Tolerance in Plants Volume II

### Message from the Guest Editors

Abiotic stress includes drought, high temperatures, low temperatures, nutrient deficiency, UV-B, salt, and so on. To cope with these stresses, plants have evolved a series of adaption strategies which allow them to survive. During these processes, plants undergo physiological, biochemical, and gene expression changes. However, our understanding of their genetic mechanisms remains incomplete. The present Special Issue presents analyses of plant genetic mechanisms responding to abiotic stresses. It includes but is not limited to the topics of plant physiological, multi-omics, transgenic, genetic, and epigenetic technologies. We welcome both reviews and original research articles. For further information about the scope of this Special Issue and preferred manuscript topics, please feel free to contact the .

## About the Journal

### Message from the Editor-in-Chief

*Genes* is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

#### Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
