

Special Issue

Genetics and Physiology of Multiple-Stress Tolerance in Plants

Message from the Guest Editor

Dear Colleagues, This Special Issue aims to collect studies that involve an in-depth exploration of the fundamental theories of plant genetics and genomics, revealing the key role of genes in plant growth, development, and genetic variation. At the same time, the tolerance mechanism of plants in response to multiple stresses such as drought, salinity, pests, and diseases is analyzed from the perspectives of genetics and physiology. In addition, new ways to enhance plant stress resistance are explored. Overall, it will provide a communication platform for researchers to promote the application and innovation of plant science research in the fields of sustainable agricultural development.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
