

Special Issue

Genetic Improvement in Horticultural Plants

Message from the Guest Editor

We invite manuscript submissions on a range of topics related to genetic improvement, including (but not limited to) the following:

- Identification, conservation, and exploration of genetic resources for improving horticultural crops, including wild relatives, locally adapted populations, and landraces;
- Use of traditional breeding techniques, such as selection and hybridization, to develop new cultivars with improved performance;
- Integration of genomic technologies, such as next-generation sequencing (NGS), gene editing using the CRISPR-Cas9 system, and system biology, into traditional breeding programs to speed up the development of new cultivars with improved performance;
- Use of genomic-assisted breeding approaches such as genome-wide association studies (GWAS), marker-assisted selection (MAS), and genomic selection (GS) to improve the efficiency and precision of traditional breeding programs;
- Application of genetic engineering and system biology approaches to engineer novel traits in horticultural crops;
- Use of genetic diversity to enhance the nutritional content, flavor, and aroma of horticultural crops.

Looking forward to receiving your papers.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
