Genetic Insights into Aortic Aneurysm Disease

Message from the Guest Editors

The genetics of aortic aneurysm disease is burgeoning rapidly, thanks to the continued identification of novel causative genes and the increased affordability of Whole Exome Sequencing for genetic testing. One might say that, in the current era, evaluation of a new patient with a thoracic aortic aneurysm is incomplete without genetic investigations to identify specific causative mutations. The specific causative gene determines, to a large extent, the clinical behavior to be expected for a specific patient and guides the clinician in determining the right time (in terms of aneurysm size and patient age) for surgical intervention. *Genes* has kindly asked me to serve as for a dedicated issue entitled “Genetic Insights into Aortic Aneurysm Disease”. My team and I have always had a superb experience publishing in *Genes*, with thoughtful reviews and prompt publication of accepted papers. I am writing to invite your submissions for this Special Issue. We welcome papers from all perspectives, including molecular, clinical, surgical, and review compilations. We can promise prompt, expert review and rapid progress toward publication for accepted papers.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
