Pharmacogenomics in Infectious Diseases

Message from the Guest Editor

Pharmaceutical treatments for infectious diseases are often complicated to manage. In some cases, patients may suffer from adverse drug reactions (ADRs) and quit treatment, whereas in others patient's may present therapeutic failure. These issues may be due to infectious agent resistance or host peculiarities.

Pharmacogenomics is important to consider when host genetic variants may explain ADRs or therapeutic failure in drug treatments. In this Special Issue, we welcome manuscripts considering host genetic variants and infectious disease drug treatments.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Experimental Cancer Therapeutics, The University of Alabama at
Birmingham, 1825 University Blvd., SHEL 814, Birmingham, AL 35294-

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
