Genetic and Genomic Research on Colorectal Cancer

Message from the Guest Editor

Colorectal cancer (CRC) is one of the most common cancers worldwide and causes a high number of deaths. Although it is a multifactorial disease, the genetic and genomic study of CRC has revolutionized our understanding of this disease by allowing us to identify key genetic and genomic alterations in its development and progression. Advances in this research have shown that CRC is genetically complex, involving alterations in key genes such as *APC*, *TTN*, *TP53*, *KRAS*, *PIK3CA*, and *MUC16*, among others, associated with various clinicopathological features of the disease. This Special Issue aims to advance genetic and genomic research in CRC, highlighting studies that explore the underlying genetic and genomic mechanisms and their clinical implications. Our objective is to deepen insights into genetic predispositions, genetic markers, comparative genomics, genetic diversity, and the overall genetic and genomic mechanisms driving CRC.

Guest Editor

Dr. Martha Patricia Gallegos-Arreola

División de Genética, Centro de Investigación Biomédica de Occidente (CIBO), Instituto Mexicano del Seguro Social (IMSS), Guadalajara 44340, Jalisco, Mexico

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
