Genetic and Molecular Mechanisms in Multiple Sclerosis

Message from the Guest Editors

Multiple sclerosis is a disorder of the central nervous system. It is a complex disease whose susceptibility involves genetic and environmental factors. In recent years, significant improvements have been made to unravel the genetic causes of multiple sclerosis.

Nonetheless, the identified variants explain ~50% of the genetic predisposition to multiple sclerosis, while their functional mechanism has been identified only in a few cases. Recently, relevance has also been given to multiple comprehensive strategies, evaluating the interplay of multiple layers of information.

In this Special Issue, we welcome original research articles, reviews and short communications aimed at better defining the genetic and molecular mechanisms involved in multiple sclerosis. Special attention will be given to innovative and comprehensive approaches that aim to fill the gap of the so-called “missing heritability”. Studies may include but are not limited to the analysis of DNA sequencing data, investigation of rare variants, evaluation of the interaction between genetics and epigenetics, transcriptome and environment, as well as functional studies of putative relevant genes.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
