

Special Issue

Genetics and Genomics of Rice

Message from the Guest Editors

Rice is one of the most important food crops worldwide. The intensive development and application of biotechnologies such as genome assembly, germplasm characterization, transformation and genome editing have greatly facilitated genetic and genomic analyses in rice. Genomes have been constructed for hundreds of rice accessions, and genetic variation and diversity have been analyzed among thousands of varieties. A large number of QTLs/genes for important agricultural traits have been identified and their functions have been mined.

This Special Issue has published four papers and attracted 6196 authors' attention so far. It aims to provide a forum for presenting the most recent advances in genetic and genomic research in rice. We seek original research articles and reviews covering all related topics, including genome assembly, germplasm resource mining, genetic diversity analysis, genome-wide association studies (GWAS), quantitative trait loci (QTL) mapping, map-based cloning, functional marker-assisted selection, etc., in the context of genetic and genomic research in rice.

Guest Editors

Dr. Yu-Jun Zhu

China National Rice Research Institute, Hangzhou, China

Dr. Zhen-Hua Zhang

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
