Liver Disease: Genetic Research and Clinical Diagnosis

Message from the Guest Editors

The liver is one of the most vital and largest organs of the human body. Recently, due to a changed lifestyle, a huge consumption of a high calorie diet and westernisation, there are rapidly increased incidences of chronic liver disease. Understanding the progression and molecular mechanism of chronic liver disease is important in today's society. There are many cutting-edge research studies that are in progress to help us understand these life-threatening maladies across the globe. In this Special Issue, we are soliciting all types of research papers and review articles which deal with recent advances in liver diseases, including NAFLD, AFLD, HCC, virus-associated hepatitis, and drug-induced liver disease.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Experimental Cancer Therapeutics, The University of Alabama at
Birmingham, 1825 University Blvd., SHEL 814, Birmingham, AL 35294-
2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
