# Genetic and Molecular Breeding of Oilseed Crops

### Message from the Guest Editor

Oilseed crops including rapeseed, peanut, soybean, sesame, flax, palm, sunflower and other plants provide fatty acids, protein, vitamins and other nutrient elements that are essential for human health. With theoretical and technological developments, considerable advancements have been made to the yield, quality and resistance breeding of these oilseed crops, and further improvements in many traits are progressing as expected. This Special Issue aims to review the progress made in recent decades and showcase the latest research on the genetic bases, molecular technology and molecular mechanisms underlying the important traits of the yield, quality and resistance of oilseed crops.

# **About the Journal**

### Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the Genes team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider Genes for your next genetics paper?

#### Editor-in-Chief

### Prof. Dr. Selvarangan Ponnazhagan

Department of Pathology, The University of Alabama at Birmingham, 1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

#### **Author Benefits**

## Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

#### **Journal Rank:**

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
