Cell Signalling and Inflammation in Cancer

Message from the Guest Editors

Inflammation is an evolutionarily conserved process, which is well known for its essential role in host defence, tissue repair, regeneration, and remodelling. Over the last few decades, the contribution of inflammation to cancer development, progression, and therapy has been widely recognised. While the induction of acute inflammation often suppresses tumour progression, the onset of chronic inflammation fosters tumorigenesis and therapy resistance. Hence, tumour-promoting inflammation is a hallmark of cancer. The source of this chronic inflammation in cancer has been ascribed to the progressive activation over time of immune cells, mostly of the innate arm of the immune system, which interact with cancer and stromal cells, thus building up an inflammatory and immunosuppressive tumour microenvironment (TME). Multiple signalling pathways, as well as inflammatory cytokines, chemokines, growth factors, and metabolites, are key orchestrators of inflammation-mediated tumour progression. In this Special Issue, we welcome reviews and original articles focused on molecular and cellular signalling pathways linking inflammation and cancer.

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
