

## Special Issue

# From Enemies to Friends: Converting Disease-Causing Viruses to Therapeutic Tools

### Message from the Guest Editors

Transforming viruses from enemies to friends remains challenging in many aspects, such as the deep understanding of basic virology, the proper methods for molecular engineering and the establishment of suitable vector systems. The previous accumulated knowledge has enabled us to generate powerful viral vector tools, while novel scientific and technical advancements will help us to further improve these vectors. Therefore, we believe it is important to prepare a Special Issue with the title “From enemies to friends: converting disease-causing viruses to therapeutic tools”. We are pleased to invite colleges from different virus fields to contribute to our Special Issue. We welcome the submission of expert reviews on individual viruses to summarize the basic principles as well as current progress on the adaptation, attenuation and engineering of viral vectors, as well as current original research works.

## About the Journal

### Message from the Editor-in-Chief

*Genes* is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

#### Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
