

Special Issue

Microsatellite Instability

Message from the Guest Editor

Microsatellites are short repetitive sequences of DNA, also known as simple sequence repeats, which have wide-ranging applications in the study of cancer, inflammation and aging as well as neurological and neuromuscular diseases. This Special Issue is inviting reviews or original contributions relating to any type of microsatellite instability in humans or other model organisms as well as the genes and mechanisms that generate microsatellite instability and cause diseases. Prof.

Guest Editor

Prof. Dr. Maija Kohonen-Corish
University of New South Wales (UNSW), Sydney, Australia

About the Journal

Message from the Editor-in-Chief

Genes is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan
Department of Pathology, The University of Alabama at Birmingham,
1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
