

## Special Issue

# Genes and Biomarkers of Mood and Anxiety Disorders

### Message from the Guest Editors

Anxiety and depression share a long, close history in psychiatric nosology and treatment. In addition, recent genetic studies have revealed that MDD and ADs are complex, heritable phenotypes with intriguing genetic correlations. Given the prevalence and the immense social and economic burden of these disorders, it is of strong interest to find biomarkers helping to improve diagnosis, prognosis, and accelerate the drug discovery process.

A biomarker is “a characteristic that is objectively measured and evaluated as an indicator of normal biological processes, pathogenic processes, or pharmacologic responses to a therapeutic intervention”, including genomics, epigenomics, transcriptomics, and proteomic profiles.

For this Special Issue, we would like to invite reviews, perspectives, and research papers that highlight the most recent and significant advances in this field, as well as indicate new research frontiers.

## About the Journal

### Message from the Editor-in-Chief

*Genes* is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

#### Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
