

Special Issue

Geography as a Transdisciplinary Science in a Changing World

Message from the Guest Editor

Modern geography differs greatly from that of previous eras, with its research now serving as a major source of information for addressing complex societal issues related to global and planetary changes, climate change, biodiversity and habitat loss, and aspects of human–environment interactions. As society encounters ongoing challenges, geography is positioned as an important discipline for supporting societal resilience and understanding the relationship between the geosphere, biosphere, and human communities. The aim of this Issue is to collect research demonstrating how geography can be redefined for the future and continue to develop alongside other core scientific fields.

About the Journal

Message from the Editor-in-Chief

Geographies is an open access, cross-disciplinary journal that covers the physical features of the earth and its atmosphere, also including the human dimension. The scope of this journal is extremely wide, from the study of the various components that make up our planet, to the tools used to conduct these studies, to the human impacts that affect us all. All of these issues can be addressed at a variety of spatial and temporal scales from global to local and from a single point in time through eons. *Geographies* promotes a quest for knowledge and to finding solutions to many of our most pressing and timely issues to benefit our world.

Editor-in-Chief

Prof. Dr. Luca Salvati

Department of Economics and Law, University of Macerata, Via
Armaroli 43, I-62100 Macerata, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Geography) / CiteScore - Q2 (Social Sciences (miscellaneous))
