

## Special Issue

# Advances in Applied Wildfire Research

### Message from the Guest Editor

Wildfires are major ongoing worldwide natural hazard. Urban development and a changing climate are exposing increasing numbers of people, homes and infrastructure worldwide to the risk and impacts of these events. However, ongoing developments in simulation and modeling, remote sensing, data gathering and geospatial intelligence are increasing our ability to understand these events, as well as guide operational wildfire management, recovery and resilience. The abundance of readily available cloud-based computing resources can provide detailed information on wildfires allowing strategies to be developed for their control, management and prevention. This SI covers these themes, with a focus on the latest techniques in wildfire observation, data processing, machine learning, simulation and risk analysis under changing regimes, as well as interrelations between these disciplines and the subsequent impact and outcomes for future wildfires. ## About the Journal

### Message from the Editorial Board

---

#### Editors-in-Chief

Prof. Dr. Zhong Lu

Roy M. Huffington Department of Earth Sciences, Southern Methodist University, Dallas, TX 75275, USA

Dr. Tiago Miguel Ferreira

Department of Geography and Environmental Management, University of the West of England-UWE Bristol, Frenchay Campus, Bristol BS16 1QY, UK

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, GeoRef, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2024).
