Flood Risk Analysis and Management from a System's Approach

Message from the Guest Editors

Improved methods and new insights in many aspects of flood risk analysis and management have become available in recent decades. To further improve flood risk management, however, it is crucial to not only focus on improvements of specific elements but to consider them in a coherent way. We welcome papers that contribute to flood risk analysis techniques that provide insight into the flood risk of larger river systems, coastal systems, or larger areas with multiple waterways and take into account interdependencies through weather, space, and time. We think of papers that study exceedance probabilities of certain damages in areas with multiple waterways, challenges in getting consistent river flows in areas with multiple tributaries, river-dike-floodplain interactions, and long-term interactions between physical and societal systems. Also, the development of strategies for systems, taking into account system-criteria such as equity, regret, and sustainability, are welcome. Dr. Karin de Bruijn

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, GeoRef, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
