

## Special Issue

# Preventing Geohazard Effects on Constructions, a Focus on the Up-to-Date Mitigation Measures

### Message from the Guest Editors

Facing geohazards is a daily challenge, and increasing the understanding of the involved mechanisms is the first step towards disaster prevention. These events have consequences on the safety of people and constructions, with an impact on the economic and social systems. This Special Issue focuses on mitigation solutions for geohazards within the context of earthquakes, river floods and land subsidence, debris movements and sinkholes, soil erosion, coastal erosion, and rise in sea levels. More emphasis is given to civil infrastructures such as bridges, lifelines, embankments, dikes, foundations, and tunnels. Real-field monitoring, laboratory tests, and numerical simulations can be used as supporting tools for the description of the reference context and the performance of the adopted mitigation systems. Risk assessment, evaluation of the damage scenarios, multi-hazard analyses, risk and vulnerability reduction, resilience, disaster response and reconstruction, and exposure are all welcome topics. ## About the Journal

### Message from the Editorial Board

---

#### Editors-in-Chief

Prof. Dr. Zhong Lu

Roy M. Huffington Department of Earth Sciences, Southern Methodist University, Dallas, TX 75275, USA

Prof. Dr. Tiago Miguel Ferreira

Instituto Superior Técnico (IST), University of Lisbon, Av. Rovisco Pais, 1049-001 Lisbon, Portugal

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, GeoRef, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.1 days after submission; acceptance to publication is undertaken in 4 days (median values for papers published in this journal in the second half of 2025).
