Geomorphological Mapping for Geohazards: Innovative Methods and Techniques

Message from the Guest Editors

Geohazards, such as landslides, floods, volcanic eruptions, and earthquakes, recurrently threaten human lives and activities worldwide. Geomorphological mapping plays a crucial role in understanding geohazard-related processes through a meaningful representation of their associated landforms. In recent years, new methods and techniques have been applied to geomorphological mapping, and new models have been proposed for landforms classification. This Special Issue aims to collect original research about the overall topic of geomorphological mapping applied to the assessment and zoning of geohazards, with a specific focus on innovative methods and techniques.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, GeoRef, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
