

## Special Issue

# Satellite and Aerial Remote Sensing of Geohazards in Cultural and Natural Heritage Sites

### Message from the Guest Editors

Natural and cultural heritage worldwide often faces geological and human-induced processes that can potentially threaten its integrity, value and accessibility. This special issue of *GeoHazards* aims to gather research articles, reviews, short communications and technical notes showcasing the use of aerial and satellite remote sensing technologies and their derived data to study geohazards in heritage sites and landscapes.

We welcome papers on the current scenarios of natural and human-induced threats to the conservation of heritage sites worldwide, focusing on:

- target geographical domain: local, regional, country or global scales;
- heritage category: UNESCO World Heritage (natural and cultural), Global Geoparks, and Biosphere Reserves; national parks, natural reserves, historic sites, listed buildings, or other world-, country- and regional-level heritage site designations.

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, GeoRef, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
