Message from the Guest Editors

Dear Colleagues,

The objective of the Special Issue is to provide an overview of the state-of-the-art applied research exploiting the capabilities of optical and SAR remote sensing applied to the Earth system (solid Earth, fluid Earth, and atmosphere). Satellite outcomes and in situ data can be cross-validated and compared in the GIS environment, which is a reliable tool for scientists, stakeholders, and decision makers.

In particular, panchromatic, multispectral, and hyperspectral sensors provide reliable instruments for observations of land (soil wetness, agriculture, forestry, mapping, and disaster monitoring), sea (fishery), and space weather. Papers related to data interoperability, mining, and management are warmly welcome.

Message from the Editor-in-Chief

Geomatics is an information technology discipline which integrates the tasks of gathering, storing, processing, modeling, analyzing, and delivering spatially referenced or location information.

Geomatics journal offers a new forum to promote multidisciplinary research over broad ranges geomatics innovative research and applications. Original contributions in the form of research papers, communications, letters, short notes, and reviews on all aspects of *Geomatics* are invited.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 3.2 days (median values for papers published in this journal in the second half of 2023).

Recognition of Reviewers: APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
