

Special Issue

Critical Metals from Magmatic–Hydrothermal and Supergene Systems: From Genesis to Comprehensive Utilization

Message from the Guest Editors

In this Special Issue, we focus on magmatic-related mineralization of critical metals, including Li, Be, Sn, W, Ge, In, Cd, Ga, and ion-adsorption rare earth element (iREE), with an emphasis on the sources of ore-forming materials, occurrence states, ore-forming processes, controlling factors, and the links between major geological events and mineralization. It should be noted that the articles focusing on ‘comprehensive utilization’ should emphasize their connection to geological processes. We recommend that authors clearly articulate how their work on extraction or processing is informed by, and linked to, ore-forming processes and mineralogy.

About the Journal

Message from the Editor-in-Chief

Understanding the Earth's origin and its bio-geological evolution, the multiple implications of the geosciences (as a coherent set of interconnected disciplines), and the sociocultural and ethical interdisciplinary approaches, will be crucial for a better understanding of Nature, and also for undertaking scientifically based political decisions.

We are committed to drive *Geosciences* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts.

Editor-in-Chief

Prof. Dr. Alberto G. Fairén

2. Department of Astronomy, Cornell University, Ithaca, NY, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (General Earth and Planetary Sciences)
