

Special Issue

Magnetotelluric Monitoring of Geodynamic Processes

Message from the Guest Editors

This Special Issue focuses on magnetotelluric monitoring of the Earth's crust aimed to detect and characterize the geodynamic processes taking place in seismically and volcanically active regions and in areas where crucial systems are located. During recent years, efforts have been greatly intensified to better understand the physical properties of seismoelectromagnetic signals, accompanying seismic wave fields radiated from earthquakes promoting the installation of permanent MT stations, collocated at seismic stations. This Issue aims at collecting all research developments related to an extension of MT technique as a monitoring tool combining multidisciplinary approaches applied as electromagnetic times series analysis, geophysical, and geological methods to achieve a better understanding of Earth's electromagnetic environment toward developing innovative monitoring techniques and to provide a comprehensive update of the state of the art relating stress changes in the lithosphere, geohazards, and space weather.

Guest Editors

Dr. Marianna Balasco

National Research Council, Institute of Methodologies for Environmental Analysis, C.da S. Loja, 85050 Tito, PZ, Italy

Dr. Gerardo Romano

Department of Earth and Geo-Environmental Science, University of Bari, Via Orabona 4, 70125 Bari, Italy

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Understanding the Earth's origin and its bio-geological evolution, the multiple implications of the geosciences (as a coherent set of interconnected disciplines), and the sociocultural and ethical interdisciplinary approaches, will be crucial for a better understanding of Nature, and also for undertaking scientifically based political decisions.

We are committed to drive *Geosciences* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts.

Editor-in-Chief

Prof. Dr. Alberto G. Fairén

1. Centro de Astrobiología, CSIC-INTA, Madrid, Spain
2. Department of Astronomy, Cornell University, Ithaca, NY, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (General Earth and Planetary Sciences)
