

Special Issue

Soil Hydrology and Erosion Volume 2

Message from the Guest Editor

Soil hydrological processes are studied in various fields: Agronomy, environmental science, forestry, hydrology, meteorology, soil conservation, and water management. Proper understanding and prediction of soil hydrological processes in the vadose zone and aquifers is a base for such various applications. Specifically, soil conservation practices are aimed at reducing soil loss associated with land use or land use change. To quantify the potential benefits of conservation practices, land managers need reliable tools to predict soil loss. In recent years, research has been undertaken to develop or improve hydrology and erosion models. These models have a wide range of spatial and temporal scale, from plot to watershed scale and from rainfall event to annual. In the first volume of this Special Issue, various topics on hydrology and erosion were published. Therefore, we would like to invite you to submit the latest research on this topic in this second volume.

About the Journal

Message from the Editor-in-Chief

Understanding the Earth's origin and its bio-geological evolution, the multiple implications of the geosciences (as a coherent set of interconnected disciplines), and the sociocultural and ethical interdisciplinary approaches, will be crucial for a better understanding of Nature, and also for undertaking scientifically based political decisions.

We are committed to drive *Geosciences* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts.

Editor-in-Chief

Prof. Dr. Alberto G. Fairén

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q1 (General Earth and Planetary Sciences)
