Soils as Archives of Human-Nature Interaction

Message from the Guest Editor

Soil is not only an important natural resource, it is also the main archive of the entire history of mankind. All civilizations, on all continents, arose, developed and collapsed on the soil. People influenced the soil, changed it—created cultural layers, ploughed, grazed cattle. They cut down trees, changed riverbeds, and created or drained lakes—that is, they completely changed the original landscape, primarily soil and vegetation. Consequently, in soils and soil-sedimentary deposits, a huge information pool has been preserved about the economic, household and ritual activities of people in the past. We invite all specialists working in the field of archaeological soil science and geoarchaeology to send their articles so that colleagues can benefit from their results. We have no restrictions on research methods—everything new will be welcomed. Articles that have taken an integrated approach will be especially welcome, as the results are usually the most informative and interesting in this case.

About the Journal

Message from the Editor-in-Chief

Understanding the Earth's origin and its bio-geological evolution, the multiple implications of the geosciences (as a coherent set of interconnected disciplines), and the sociocultural and ethical interdisciplinary approaches, will be crucial for a better understanding of Nature, and also for undertaking scientifically based political decisions.

We are committed to drive *Geosciences* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts.

Editor-in-Chief

Prof. Dr. John C. Eichelberger

Alaska Center for Energy and Power, University of Alaska Fairbanks,
Fairbanks, AK, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q1 (General Earth and Planetary Sciences)
