

Special Issue

Driving, Aging, Safety and Health

Message from the Guest Editor

Although older adults often take considerable steps to ensure their driving safety, many risk being injured or killed in crashes due a variety of aging health conditions. Medical issues, lifestyle choices, medications, and mobility needs, among many other factors, both known and unknown, significantly impact driving safety. Older drivers comprise a significant number of licensed drivers across the globe. Thus, there is a growing need to identify these factors and assess how they impact safety in order to develop responsive countermeasures.

Potential contributions to this Special Edition of *Geriatrics* may include studies assessing risks to safe driving created by age-related functional impairments, mental health conditions, medication side-effects, and alcohol and drug use. Additionally, studies are welcomed that investigate protective factors for safe driving, including family and peer support, volunteering/working, physical activity, emerging in-vehicle technologies, and access to alternative mobility.

About the Journal

Message from the Editor-in-Chief

Our new journal is launched to serve geriatrics specialists and colleagues from other disciplines as an interface between theory and clinical practice. Pushing the boundaries of the discipline, I kindly invite you to consider publishing your current work in *Geriatrics*. We have chosen the format of an open access journal to provide all interested parties with a platform for their basic research and health care studies as well. For details on the submission process or any other matter, please visit the journal website. I hope to handle your contribution to *Geriatrics* soon to publish innovative, relevant, thought provoking ideas.

Editor-in-Chief

Prof. Dr. Ralf Lobmann
