Dysphagia in Elderly

Message from the Guest Editors

Dysphagia is common in the elderly; the importance of handling inpatients and follow-up after discharge from a hospital should be addressed according to the advancing aging of society. Recently, rehabilitation for inpatients has been applied in the intensive care unit. Accordingly, oral management should also be intervened in early stage. In addition, more importantly, dysphagia rehabilitation for home visits and an preventive approach for the community-dwelling elderly have been promoted besides conventional rehabilitation only for inpatients. Additionally, remote diagnosis and treatment via the application of information and communications technology (ICT) is being promoted in the medical field, and the field of dysphagia rehabilitation has high affinity. However, very few reports have been produced so far. Accordingly, this Special Issue starts with an introduction of visiting dysphagia rehabilitation. We would like to introduce several approaches or new points of view.

About the Journal

Message from the Editor-in-Chief

Our new journal is launched to serve geriatrics specialists and colleagues from other disciplines as an interface between theory and clinical practice. Pushing the boundaries of the discipline, I kindly invite you to consider publishing your current work in *Geriatrics*. We have chosen the format of an open access journal to provide all interested parties with a platform for their basic research and health care studies as well. For details on the submission process or any other matter, please visit the journal website. I hope to handle your contribution to *Geriatrics* soon to publish innovative, relevant, thought provoking ideas.

Editor-in-Chief
