Endocrine-Metabolic Diseases
and Aging, Italian National
Institute of Health, Via Giano
della Bella 34, 00162 Rome, Italy

Deadline for manuscript
submissions:

closed (31 March 2024)

Message from the Guest Editor

NCDs share four major risk factors: tobacco use, physical inactivity, the harmful use of alcohol and unhealthy diets. According to the WHO Global Action Plan for the Prevention and Control of NCDs 2013-2030, progress has been made in addressing tobacco use, but similar progress has not yet been achieved with other risk factors. There is a need for greater use and analysis of data on NCD risk factors, diseases and mortality through traditional and eHealth research to develop targeted public health interventions and evidence-based policy planning.

This Special Issue of *Healthcare* seeks commentaries, original research, short reports, and reviews on NCD risk factors, diseases and mortality, as well as on the impact of the COVID-19 pandemic and other health emergencies on NCDs.

The aim of the Special Issue is to present advances in research activities on NCDs using traditional and eHealth approaches.
