Deadline for manuscript submissions:

closed (30 April 2024)

Message from the Guest Editors

Dear Colleagues,

Biostatistics is an indispensable field within public health that utilizes statistical methods to investigate and understand health-related phenomena. It plays a vital role in several domains of public health, including disease surveillance, epidemiology, clinical trials, health services research, environmental health, and policy evaluation. Its scope of application ranges from analyzing disease patterns and identifying risk factors to evaluating the effectiveness of interventions and assessing healthcare outcomes. We aim to understand the recent developments in biostatics and how they could be relevantly utilized for improvements in public health interventions, initiatives, and policy changes. We cordially invite insightful publications on the topic.
