### Message from the Guest Editors

Globally, stroke continues to be a leading cause of death and long-term disability. Annually, stroke affects approximately 15 million people; 75% of strokes occur in adults aged 65 years or older. Due to the greater prevalence of comorbid conditions in the older population, the consequences of stroke in those cases are more severe. Although the overall incidence of stroke is declining in many high-income countries, the absolute number of strokes continues to increase because of the ageing population in high-income and low- as well as middle-income countries, in addition to improved survival.

This Special Issue seeks empirical and review papers related to any of these themes, and is not intended to exclude other topics that may be relevant to stroke and ageing. Early phase or pilot projects for prevention, education, or rehabilitation after stroke in older adults, as well as projects highlighting technology-based interventions to support people in the community after stroke or those focused on consumer involvement, will also be considered.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Healthcare* is an international, peerreviewed, open access, multidisciplinary journal. Original research articles, short communications, review articles, and symposium highlights are welcomed.

*Healthcare* hopes to influence global health and disease aspects, and hopes to gain high visibility and acceptance by the scientific and healthcare community and will dedicate itself to covering special and specific topics in special issues.

We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

**Journal Rank:** JCR - Q1 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)
