Message from the Guest Editor

Dear Colleagues,

In order to improve a patient's physical ability, effective physiotherapy treatment and an assessment of comprehensive physiotherapy appear to be important. Thus, proper understanding of clinical factors along with adequate physiotherapy has become a critical component of any comprehensive rehabilitation. In addition, the accurate assessment of physical function can lead to the early detection and prevention of disease. Therefore, it is critically important that physiotherapists constantly develop their knowledge and techniques. This Special Issue aims to serve as a global forum for the discussion of all aspects of motion analysis, physiotherapy, and rehabilitation studies including evaluation, treatment, and prevention.
