### Message from the Guest Editors

Dear Colleagues,

Surgery for young women must respect their desire for offspring as much as possible; it must be radical, but at the same time, minimally invasive. The creation of multidisciplinary paths, the sending of patients to high-level centres, and the use of minimally invasive gynaecological surgery techniques allow the preservation of patients' fertility. The maintenance and implementation of fertility-sparing pathways is necessary to avoid premature iatrogenic infertility.

In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Systematic reviews and meta-analyses of existing fertility-sparing programmes for benign and malignant gynaecological surgical pathologies.
- Validation studies of existing fertility-sparing surgical approaches.
- Comparative studies of different fertility-sparing pathways.

We look forward to receiving your contributions.

Dr. Federica Perelli

Dr. Giuseppe Vizzielli
