Deadline for manuscript
submissions:

30 September 2024

Message from the Guest Editor

Family is the most important thing for a person. The subjects of nursing are not only individuals, but also families, groups, organizations and communities. Among these, families are the subject of family nursing, and family nursing is a practical science that targets the entire family and enables the family to achieve self-actualization. In contrast to individual nursing, which focuses on individuals, family nursing, which considers the entire family as a system and unit, is spreading worldwide, but true family nursing research is still currently lacking.

I am pleased to invite you to provide researchers and enthusiasts with evidence of family nursing to realize the well-being of the whole family, family nursing theory that supports new family nursing, and family assessment and family intervention that views the family as a system and unit.

This Special Issue aims to promote the further development of family nursing science by consolidating research that focuses on the whole family. A study of family members (singular or plural) in the family background is individual nursing research.

I look forward to receiving your contributions.

an Open Access Journal by MDPI
