submissions:

closed (31 May 2022)

Message from the Guest Editors

This Special Issue will focus on the latest updates on the prevention, diagnosis, and treatment of skin disorders in hematological disease, aiming mainly to investigate how all these new developments are adjusted in clinical practice.

In this Special Issue, experts in this field will highlight the current approaches to the histopathological diagnosis and clinical management of patients with cutaneous signs of different subtypes of lymphoproliferative disorders, and of all other hematological diseases. Papers that exclusively represent histological and/or radiological profiles related to them are also welcome. Moreover, original articles will provide novel insight into the molecular pathogenesis and immunological hallmarks of cutaneous lymphoproliferative disorders which may be exploited for innovative treatment strategies in the future.
