

Special Issue

Cutting-Edge Approaches in Neurological Disease Treatment

Message from the Guest Editors

This Special Issue highlights recent clinical advancements in the treatment of neurological diseases, focusing on approaches that enhance patient care and improve health outcomes. Neurological diseases, such as Alzheimer's, Parkinson's, multiple sclerosis, and fibromyalgia, affect millions worldwide, contributing to significant disability and healthcare challenges. This Special Issue will emphasize innovations in diagnostic tools that allow for earlier and more precise detection of these conditions, as well as new therapeutic interventions that are directly applicable in clinical practice. Topics include advanced imaging methods, improved clinical management strategies, and non-invasive neuromodulation techniques like transcranial magnetic stimulation that are showing promise in routine care. By gathering insights from leading clinicians and healthcare experts, this Special Issue aims to provide an up-to-date perspective on practical approaches for managing neurological diseases, discuss emerging clinical trends, and outline future directions for optimizing patient outcomes.
