Intimate Partner Violence: Risk and Vulnerability Factors, Health Promotion and Prevention in Educational and Healthcare Contexts

Message from the Guest Editors

Violence in couple relationships has become a multidimensional problem has spread alarmingly to the adolescent age. this type of violence is growing every year among young people, becoming even more frequent than gender violence in adults. focused on different contexts, social agents, and the way adolescent are affected by the variables linked to the phenomenon and how they interact, modifying the way teenagers see romantic relationships and violence are important to detect not only risk and protector factors, but to promote physical, emotional, and psychological health. Research areas may include (but not limited to) the following: Protector factors and risk factors in teen gender violence. Consequences of victimization in teen gender violence social, emotional, and behavioural level (anxiety, depression, suicide). Social media influence. Cyber teen dating violence, emotional dependence and control, insecurities, sexist attitudes, and stereotypes, sexualization, and risk behaviours on the internet. Victimization and gender differences. Male and female victims, risks, types of violence, seek of help, and consequences.
