Special Issue

Advances in Traditional and eHealth Research on Noncommunicable Diseases

Message from the Guest Editor

NCDs share four major risk factors: tobacco use, physical inactivity, the harmful use of alcohol and unhealthy diets. According to the WHO Global Action Plan for the Prevention and Control of NCDs 2013-2030, progress has been made in addressing tobacco use, but similar progress has not yet been achieved with other risk factors. There is a need for greater use and analysis of data on NCD risk factors, diseases and mortality through traditional and eHealth research to develop targeted public health interventions and evidencebased policy planning. This Special Issue of *Healthcare* seeks commentaries, original research, short reports, and reviews on NCD risk factors, diseases and mortality, as well as on the impact of the COVID-19 pandemic and other health emergencies on NCDs. The aim of the Special Issue is to present advances in research activities on NCDs using traditional and eHealth approaches.
