Recent Advances and Innovation in Telehealth Use Among Older Adults

Message from the Guest Editor

The global demographic shift toward an aging population presents unprecedented challenges for healthcare delivery systems. With older adults representing the fastest-growing demographic, healthcare sectors are facing mounting pressure to develop innovative, accessible care models for this population. Telehealth has emerged as a transformative solution, bridging geographical barriers, reducing costs, and improving access for those with mobility limitations or residing in underserved areas. Despite promising developments, research gaps persist regarding optimal implementation strategies, long-term effectiveness, digital equity, and age-friendly solutions that accommodate diverse technological literacy levels. This Special Issue showcases cutting-edge research and evidence-based telehealth practices among older adults. I invite researchers, clinicians, technologists, and policy experts to submit original articles, reviews, case studies, and perspectives that address the multifaceted landscape of telehealth for older adults.
