Special Issue

Health Promotion and Disease Prevention Strategies for Older Populations to Ensure Healthy Lifespans

Message from the Guest Editors

This Special Issue is calling for high-quality original research articles, systematic reviews, meta-analyses, and short papers related to health promotion and disease prevention. Research topics could include, but are not limited to, preventive medicine in aging in the following areas:

- Cognitive decline;
- Diabetes;
- Hepatitis;
- Cardiovascular diseases;
- Cancer;
- Respiratory diseases;
- Longevity.

We believe it could be beneficial to create a space for those involved in scientific research on these issues to come together to explore new approaches to promote health and prevent disease in the aging population. We hope this can contribute to the broader goal of improving quality of life and sustaining healthcare systems.
