Screening, Prevention and Response Strategies for Chronic Cardiopulmonary and Metabolic Diseases

Message from the Guest Editor

Today, chronic cardiopulmonary diseases and metabolic diseases have gained prominence worldwide, as they are pathologies that affect a large portion of society and can be linked to extrinsic factors such as lifestyle habits; among them are inadequate diet, smoking, sedentary lifestyle, and harmful alcohol consumption. We are pleased to invite you to provide researchers based on Screening, Prevention and Response Strategies for Chronic Cardiopulmonary and Metabolic Diseases. Review studies that describe the state of the art will also be accepted. This Special Issue aims to bring together relevant studies that can bring relevant information to the area about screening, prevention, and response strategies to improve the management of these important diseases, which generate a reduction in the quality of life, high mortality rates, and high costs for the health system, and can lead to death. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following: systematic reviews and meta-analyses, observational studies, and epidemiological studies. I look forward to receiving your contributions.
