Special Issue

The Impact of COVID-19 on Mental Health Across Diverse Populations

Message from the Guest Editor

Dear colleagues, Mental health and emotion-related issues are now among the most important public health issues around the world. Among the reasons for this is the COVID-19 pandemic. Research has shown that social distancing, self-isolation, quarantine and misinformation are some of the main factors causing unusual sadness, fear, frustration, helplessness, loneliness and nervousness. In extreme cases, these factors can trigger suicidal thoughts and attempts.We are pleased to invite clinicians and researchers to provide reviews on mental health problems occurring in various cohorts and groups.We encourage the submission of original research papers (both qualitative and quantitative), reviews, meta-analyses and case studies that contribute new knowledge in this area. Interventional studies, trials and epidemiological studies are also encouraged. We look forward to receiving your contributions.
