

Special Issue

Quality Integrated Long-Term Care for Older People

Message from the Guest Editor

Population ageing is a challenge that the world is currently facing, and thus, expanding access to and continuity of long-term care services has become a common international concern.

In recent years, the increase in chronic diseases, such as non-communicable diseases, has also increased the need for long-term care, so the provision of quality long-term care for older people is an issue that needs to be addressed. We need to consider quality assessment of long-term care and integration of all relevant services.

This Special Issue seeks contributions on a range of findings related to LTC resources and access, quality of life of users and carers, integration between different services, dementia care, and ICT use, in order to increase our knowledge and evidence on quality integrated LTC.

We hope that the manuscripts submitted to this Special Issue, addressing LTC for older people from different countries, will contribute to improving quality LTC for older people.

I look forward to receiving your contributions.
