

Special Issue

Health Supervision and Promotion in the Era of Complex Data

Message from the Guest Editors

This Special Issue aims to explore the role of artificial intelligence and predictive analytics in health supervision, investigating how these technologies can enhance clinical decision-making and population health management. It also seeks to assess the impact of digital health tools and telemedicine on disease prevention and patient management, analyzing their effectiveness and feasibility across various clinical and community settings. For this Special Issue, we welcome the submission of original research articles and reviews. Research areas may include (but are not limited to) the following:

- AI-based predictive models for early disease detection and prevention.
- Telemedicine and remote health supervision.
- Digital health applications for personalized physiotherapy and rehabilitation.
- Big data analytics in patient monitoring and chronic disease management.
- Evidence-based approaches in pelvic health and women's health rehabilitation.
- Infodemiology and the role of online health information in clinical decision-making.
- The integration of technology in exercise therapy and public health.

We look forward to receiving your contributions.
