

Special Issue

Diagnosis and Management of Bone Diseases

Message from the Guest Editor

The aim of the Special Issue is to focus on diagnosis and up-to-date management of major bone diseases that are associated with bone fragility, including nutritional rickets, hypophosphatemic rickets, osteogenesis imperfecta, Ehlers–Danlos syndrome, Marfan's syndrome, Paget's disease, hypophosphatasia, osteopetrosis, osteomalacia, osteopenia, osteoporosis, osteoarthritis, bone cancer and other related conditions. I would like to extend an invitation for you to submit original research papers, review articles, compelling case studies, and descriptions of diagnostic procedures for consideration and potential publication. Studies that deepen the understanding of new diagnostic mechanisms and novel management approaches are especially welcome. We welcome researchers to discuss the benefits of cutting-edge diagnostic techniques as well as the drawbacks of established diagnostic procedures in bone pathology. Reports on the treatment and care given to patients by multidisciplinary teams are also of interest. We especially appreciate innovations in basic science and molecular genetics that provide powerful new diagnostic approaches for specific bone diseases.

Author Benefits

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1
(Leadership and Management)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
