Special Issue

Evaluating Health Technology Implementation and Adoption in Hospital Settings

Message from the Guest Editors

- Hospital-based health technology assessment (HB-HTA) evaluates new health technologies from the perspective of a single hospital or healthcare unit to guide internal decision-making for adoption. This process plays a critical role in evidence-informed decision-making within healthcare institutions. As hospitals increasingly adopt innovative technologies to improve patient outcomes and operational efficiency, the need for structured, context-specific evaluation frameworks becomes paramount.
- This Special Issue on "Evaluating Health Technology Implementation and Adoption in Hospital Settings" aims to establish current evidence on HB-HTA implementation strategies, evaluation methods, and policy implications. We welcome original research, case studies, and reviews examining clinical effectiveness of telehealth and digital health technologies, implementation requirements, organizational readiness, workforce readiness and training, economic impact, equity and access considerations, and sustainability strategies specific to hospital environments.
