

## Special Issue

# Updates on Oncology Rehabilitation

### Message from the Guest Editors

Patients being treated for cancer may present significant changes in body structures and functions, which could impact functional outcomes regarding activities and participation in some domains belonging to the biopsychosocial model of the International Classification of Functioning, Disability and Health developed by the World Health Organization. Therefore, interventions are needed to minimize the side effects of cancer treatments (lymphedema, fatigue, pain), preventing secondary comorbidities (cardiovascular diseases), recurrences, or the abandonment of treatments. In this Special Issue, we welcome original research articles/reviews. Research areas may include (but are not limited to) the following: multidisciplinary oncological rehabilitation, both before, during, and after oncological treatments; rehabilitation treatments to prevent fatigue, pain, lymphedema, and musculoskeletal problems in patients with cancer; rehabilitation treatments to improve occupational performances in patients with cancer; reviews of evidence of treatment rehabilitation in oncology; physical activity and cancer; oncological telerehabilitation.

### Guest Editors

Prof. Dr. Bárbara Oliván Blazquez

Dr. María Nieves Muñoz-Alcaraz

Prof. Dr. Josefa González Santos

### Deadline for manuscript submissions

30 June 2026
