# Special Issue

# Application of Artificial Intelligence in Oral Medicine

### Message from the Guest Editors

In recent years, an increasing number of Al models, especially deep learning, have been developed in various disciplines of oral medicine for a wide range of clinical and research applications. Clinically relevant Al tools that are capable of fulfilling technical requirements with promising commercial potential are expected to bring us closer to a more precise and personalized management of patients with a variety of oral, maxillofacial, and head and neck conditions in the near future. This Special Issue of *Healthcare* seeks commentaries, original research, short reports, and reviews on recent progress and trends in AI across all oral disciplines and head and neck diseases, including but not limited to Al-assisted diagnosis, prediction, and treatment. The articles in this Special Issue are expected to provide clinicians, researchers, and healthcare organizers with an up-to-date understanding of the potential application of AI in oral medicine as well as suggestions on the issues and obstacles encountered in this area.
